

Jixing Li — Explorer of the New Time and Space
Founder of the Theory of Multi-Dimensional Unified Universal Energy

Presented to You:

A new technique to restructure human body engineering and living energy system -

This is a breakthrough in human body biological engineering. By improving the living energy system we will be able to:

- Improve health condition
- Strengthen vitality and immune system
- Achieve longevity and rejuvenation
- Develop brain function
- Increase intelligence
- Upgrade inherited DNA system

Jixing Li – Explorer of the New Time and Space

Master Jixing Li was born in Fu Shun, China. He started learning and practicing martial arts and qigong at the age of eight. Having studied under many famous and illustrious qigong practitioners, in 1980 he opened his own clinic in Tokyo where he used qigong for both health and beauty treatments. He is one of the few licensed by the Institute of Qigong Science and Research of China, and is solely authorized by that institute to issue qigong licenses in Japan.

The effectiveness of his qigong healing has attracted both scholarly and popular attention. He has cooperated with several university research programs in human energy, participated in an experiment carried out by the Agency of Science and Technology (Japanese government agency), and joined a research program run by the ESP Research Institute of the United States. Major Japanese Television stations, such as NHK – Japan National Broadcasting, Asahi, Fuji, Tokyo, and Nihon Television, have telecasted many of these experiments. His work and exercises were featured in dozens of widely circulated Japanese magazines. Additionally, he is the author of a 1998 Japanese bestseller, *The Power of Qigong*, published by the PHP Institute of Japan.

During his years of practice, Master Li has successfully helped patients with serious illnesses such as cancer, heart problems, nervous system disorders, etc. In addition, he is well known for his rejuvenation treatments. The result of a younger looking appearance is not simply from a so called “Qigong face lift” but from a combination of regenerating young cells, revitalizing each organ and replenishing the nervous systems. In

other words, it’s a practice of reversing aging process instead of a beauty treatment.

Since 2004, Master Li has been invited to participate in seminars and conferences hosted by reputable Qigong and Health associations, such as World Qigong Congress, Whole Person Health Summit, CAMExpo, and Health workshop by State University of New York at Stony Brook, to give lectures and demonstrate energy healing in the United States. Master Li’s capability attracts attention from both bio-energy researchers and serious-minded students. Responding to invitations from Pennsylvania State University’s Materials Research Laboratory, Duke University and Arizona State University, Master Li started his first collaboration with U.S. scientists to further advance the understanding of human subtle energy and the role of consciousness in healing.

Now he resides in Mountain View, California. He wishes through his newly established non-profit organization -The Universal Energy Foundation, he is able to help more people and work with more energy scientists and qigong masters on how to use qigong and related energy modalities to remedy extreme and urgent environmental issues.

The Restructuring of Human Body Engineering and the Living Energy System

This is a breakthrough in human body biological engineering, a new technique to improve the human body energy system

Base on the Theory of Multi-Dimensional Unified Universal Energy

This theory is based on a new philosophy which incorporates the concept of invisible energy and manifest energy to replace the old three-dimensional material based philosophy – a philosophy has limited our thoughts in a three-dimensional space and could not explain and recognize many phenomena happened in the objective reality. We think this new philosophy can better explain those phenomena in our universe because; first, in recent years, scientists already discover that there are “energies” beyond “material and spirit”. Second, those invisible energies have extraordinary functions; they can affect material and other energies, in particular, biological energy systems of human body and illness. And those effects which are beyond regular sense have been observed and recorded in the past and proved through scientific experiment.

Due to the lack of knowledge, our existing philosophy can't recognize and utilize those high performance, high intelligent, high function energies of nature and the universe. Therefore, we are not able to develop an efficient technique to improve our health, enhance our living energy system, and achieve rejuvenation and longevity.

In this theory, Jixing Li also brought up the principle of “the comprehensive balance of the universal energy movement” and the close relationship between human body living system, the living biological instruments (includes living biological computer, living biological antenna, living biological software, etc) and the living systems of nature and the universe. We will be able to truly understand how important it is to protect our environment and nature by realizing the value of nature's living energy system and its influence on our body.

Base on this philosophy, not only we could develop our body function to an unprecedented stage, we could even change our fate and inherited DNA system. This is a theory combines nature's science, life science and fatalism. It is also a live art which is able to restructure human body biological engineering.

Result: [Go back to the time when you were young, healthy and full of energy.](#)

Improve health condition, strengthen vitality and immune system, achieve longevity and rejuvenation, increase intelligence, develop brain functions, it can even upgrade inherited DNA system

The application of restructuring Human Body Engineering and the Living Energy System - Fortify Health Condition and Strengthen Vitality

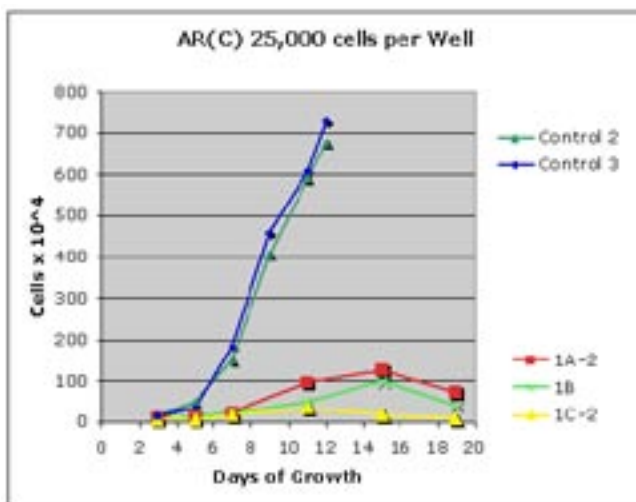

By using the multi-dimensional high-performance energy system to transform the primary energy structure of body cells and illness such as cancer and some chronicle diseases could solve many problems which modern medical science can not provide. Following two distance healing energy experiments are examples of the effectiveness of this new science and new philosophy.

First Experiment: Time: December 2nd to December 20th, 2006
Place: Laboratory of Penn State Children's Hospital
Host: Professor John E. Neely MD, Pediatrics, Hematology-Oncology

Set Up This experiment was designed to compare the growth of AR(C), a human Ewing's sarcoma cell line established and described by the author (JN) in 1985 and is known to be resistant to chemotherapy, in a treatment incubator versus a control incubator, physically separated in different rooms of the same building in Pennsylvania. Cells were planted 2.5 x10⁴ cells per well in 10 ml. of media in each well of 6 well plates. The treatment incubator contained 4 plates. A top shelf contained 3 culture plates placed diagonally back left (1A), middle (1B), and front right (1C). A bottom shelf contained one plate in the front right to serves as an internal control. The control incubator contained one plate on a bottom shelf to serve as an external control for cell growth and viability.

Procedure: Immediately after planting the cells, Mr. Li began treatment from his location in California, treating each plate on the upper shelf with different energies techniques. Every 2-5 days, the cells were removed from a single well in each plate and counted. Jixing Li has never been to Pennsylvania State University nor known the exact location of this laboratory.

Results: The cells in the upper treatment shelf grew significantly slower and eventually those cells in position 1C all died. Also, there were cells contained multiple nuclei in the experiment groups, which could not be explained by modern medical science as how it happened. The post-treatment repeat experiments at chronological day 105 showed ongoing failure of growth in position 1C, although all other positions returned to normal. Even after moving the incubator, the experiment at chronological day 190 continued to show an effect at 1C. It provides the evidence that energies not only can affect biological objects such as cells, but also have influence on non-biological objects such as the incubator. That is because the primary energy structure of the incubator has been changed, the energy condition there could control the growth of cells. This result supports the theory of Multi-Dimensional Unified Universal Energy.

Jixing Li used three different energy transformation techniques on position 1A-2, 1B and 1C-2. Control 2 and Control 3 were for comparison purpose, no energies were sent to those cells.

There were cells contained multiple nuclei in the experiment groups.

The application of restructuring Human Body Engineering and the Living Energy System - Fortify Health Condition and Strengthen Vitality

Second Experiment:

Time: November 2nd to December 12, 2007

Place: Laboratory of Pennsylvania State University Medical School

Host: Professor John E. Neely MD, pediatrics and oncology specialist

Set Up: UT-7, a human leukemia cell line was chosen for this experiment. Cells were grown in flasks, each containing 5×10^4 cells in 20 ml. media. Two incubators were placed in two different rooms, one served as a treatment incubator and another served as a control incubator. Four flasks were arranged in each of those two incubators. A top shelf contained 1 flask in the back left (1A) and 1 flask in the front right (1B). A middle shelf (1C) and a bottom shelf (2A) each contained a flask in the front right.

Cells were directly counted from the suspension using a hemocytometer chamber, every 1-3 days. Three sequential experiments were performed. Two pre-treatment studies showed both incubators had identical growth. In the third study, distance treatment by Mr. Li from California began immediately after planting the cells.

Results: All groups initially grew identically, but slowly over time, the treatment flasks 1C faltered in growth and on the 31st day, no cells alive in 1C while control flasks still showed an average of more than 140 millions cells alive. As the experiment continued, Mr. Li used different energy on the remaining treatment flasks, and the cells in the treatment 1A, 1B and 2A flask appeared to be morphologic changes, such as a large number of cells had multiple nuclei and also the total number of cells kept increasing. When the number of cells alive in the control flasks declined rapidly due to lack of nutrition, under the same set up, the total number of cells in treatment 1A has reached over four hundred million. This is a breakthrough in biological science; it showed by changing the primary energy structure of cells could not only change their characteristics but also enhance the vitality. This also provides a scientific explanation of energy rejuvenation.

Examples of Improving Health Condition, Strengthen Vitality and Immune System

Name: Ms Banyuan
Age: 69

Energy Work for:
Late-stage Cancer

Result:
There was significant improvement in her condition after just 30 hours intensive energy work in five days.

Name: Ms Chien
Age: 87

Energy Work for:
Aging Problem

Result: After about 80 hours energy works in one year, client looks like in her mid 70's and her hair grows back darker and fuller.

Restructuring Human Body Engineering and Living Energy System

Achieve Longevity and Rejuvenation

Stem cell research is a new trend in biology science. Even the Silicon Valley, the home of the world's leading computer technology, is shifting its focus towards biotechnology. And one of the major researches is on the rejuvenation, which shows us the wishes and desire of the general public. Thus, we choose the new technology of restructuring human body engineering and living energy system; and making the rejuvenation as our first choice to introduce this new type of science and philosophy. Furthermore, we will use factual effects and results to prove the scientific legitimacy of this new theory. The research of stem cell requires a massive and long term effort; when will the research bring forth a comprehensive result is still unknown. However, our fusion of modern and ancient technology has long yield successful effects. We welcome your invitation and we will use results to proof the capability of this new philosophy, science, and technology.

How to use this technology to achieve longevity and rejuvenation?

This is a method of transforming Living Human Body Energy system via fundamental energy structure. This method is not limited to the common mind set of replenishing and tuning the Qi energy. It includes replenishing and tuning both the energy and structure in the sub cell level of the brain, nerve, meridians, body fluid, bone marrow, and internal organs. This method is repairing and renewing at the fundamental energy level. This is more than just boosting the immune system, it holistically improves human body's adaptation capability towards the natural environment. It also strengthens our vitality, therefore, much more than the manifestation of a younger looking face, it actually reverse the entire body system to its younger state. Thus, it is similar to reverse time traveling. Using a limited investment to "reverse aging" for ten, thirty, or forty years of priceless youth.

Results:

- Improve skin's texture, tone, and color; diminish facial wrinkles; skin looks healthy and radiance; eyes become illumination and clear. Face becomes fresh, vigor, and lively. These will certainly prolong the professional life span of models, actors, and actresses and also improve the quality of their work.
- Energetic, fill with vitality and strength physically, it can help athletes to improve their records.
- Holistically improve physical functions and brain system, the intellect professionals are able to improve the effectiveness of their works in addition to increase creativity and intelligence. The decision makers could achieve a second peak in their career.
- Improve the quality of life; you will be able to better enjoy and appreciate your life.

What it differs from Traditional Chinese Medicine (TCM)?

Normally a long period of treatment is needed for TCM to yield a substantial result, and after achieving a certain effect further improvement is difficult. In contrast, by tuning the bio energy of human body, substantial result could be obtained in a rather short period of time. The result could be persistently improving after a longer period of practicing. Tuning energy is not only to repair but also renew the human body system. Thus, this method could rejuvenate and reverse aging while transforming from illness to a healthy condition.

What it differs from the western cosmetic surgery?

Within the paradigm of western cosmetic practice, disregard of the classical plastic surgery or the modern laser face lift where high technology instruments are used; these kind of the treatments focus only on the surface instead of solving the body system aging in a deeper lever. Thus, the result could not last long, and it would not improve body's condition. Also it would not make the skin looks healthy and radiance; it certainly will not fill one with vitality and youth. Surgery is painful; surgery may damage human body system and also comes with risk. Energy tuning method is performed in a comfortable living energy environment. It fine tunes your internal energy to its peak state, let you truly regain your youth.

Examples of Achieving Longevity and Rejuvenation

1993 TV TBS program “Super Wide” featured Li’s rejuvenation energy work on an 80-year old woman who was a CEO of a big corporation. After about 20 hours energy work, she appeared to be about 60-year old.

before

after

1992 TV Tokyo program “Ladies 4” featured live rejuvenation practice. Li performed energy work on a 40-year old model based on her photo taken when she was 26. The improvement was obvious after only 50 minutes energy reformation.

Treatment Length:
One treatment of 2 hours

Our foundation is able to help you to achieve the following goals:

- Improve health condition
- Strengthen vitality and immune system
- Achieve Longevity and rejuvenation.

We could provide our unique services free of charge to those who organize seminars for improving the health of their employees, promoting the concept of new science and culture, and/or protecting our environment. Also, should those people need to raise capital, we are able to help them by providing the above mentioned services to the party they plan to finance from. Further discussion regarding the details of the services is welcome.
